

CONCERTO
RENAL SERVICES

DIALYSIS *and* **OLDER ADULTS**

More than **50% of seniors over the age of 75** have end stage renal disease (ESRD). In individuals with ESRD, approximately 85-90% of kidney function is lost, requiring either dialysis or a successful kidney transplant for survival. However, traveling to an outpatient dialysis clinic can be disruptive, confusing, and time-consuming for older adults.

Age should not be a barrier to receiving top-notch kidney care. With Concerto, an individual can dialyze in the safety and comfort of their Skilled Nursing Facility.

In-house dialysis:

- Eliminates the risks of transportation
- Enhances quality of life, with more time for rehabilitation and facility activities
- Reduces the transmission and spread of contagious diseases
- Provides a comfortable home-like environment for dialysis treatments
- Promotes the patients' entire care team to collaborate

Reimagining nursing home dialysis care, one community at a time.
